SCHEME OF COURSES – M.TECH. (SIGNAL PROCESSING)

UNIVERSITY OF DELHI

NETAJI SUBHAS INSTITUTE OF TECHNOLOGY

Choice Based Credit system

Scheme of Courses

for

Master of Technology

in

Signal Processing

Electronics and Communication Engineering

Passed in the meeting of Standing Committee on Academic Matters, University of Delhi held on June 3, 2016.

PREAMBLE

I. INTRODUCTION

Higher education is very important for the growth and development of any country. It is a living organ and requires continuous changes to ensure the quality of education. National Knowledge Commission and University Grants Commission have recommended many academic reforms to address the challenges of today’s networked globalized world. People are coming together with the help of new technologies which is resulting towards new aspirations, expectations, collaborations and associations. The concept of “work in isolation” may not be relevant and significant anymore. The UGC guidelines on adoption of Choice Based Credit System may be an important step to revamp the processes, systems and methodologies of Higher Educational Institutions (HEIs). The teacher centric mode be changed to learner centric mode. Class room teaching and learning be made effective; relevant and interesting. Concepts and theories be explained with examples, experimentation and related applications.

A culture of discussions, arguments, interpretations, counter-interpretations, re-interpretations, opposing interpretations must be established. Research should not only be confined to redefinition, extension and incremental change. Innovation & creativity should become an epicenter for all research initiatives. The most important capital is the human capital and thus the ultimate objective is to develop good human beings with utmost integrity & professionalism for this new world.

The Choice Based Credit System supports the grading system which is considered to be better than conventional marks system. It is followed in many reputed institutions in India and abroad. The uniform grading system facilitates student mobility across the institutions within and across the countries and also enable potential employers to assess the performance of the students. The Choice Based Credit System makes the curriculum interdisciplinary and bridge the gap between professional and liberal education.

II. CHOICE BASED CREDIT SYSTEM

The Indian Higher Education Institutions have been moving from the conventional annual system to semester system. Currently many of the institutions have already introduced the choice based credit system. The semester system accelerates the teaching-learning process and enables vertical and horizontal mobility in learning. The credit based semester system provides flexibility in designing curriculum and assigning credits based on the course content and hours of teaching. The choice based credit system provides a ‘cafeteria’ type approach in which the students can take courses of their choice, learn at their own pace, undergo additional courses and acquire more than...
the required credits, and adopt an interdisciplinary approach to learning. It is desirable that the HEIs move to CBCS and implement the grading system.

A. Types of Courses

Courses are the subjects that comprise the M. Tech. programme.

1. A course may be designed to comprise lectures, tutorials, laboratory work, field work, outreach activities, project work, vocational training, viva, seminars, term papers, assignments, presentations, self-study etc. or a combination of some of these components.

2. The learning objectives and learning outcomes of each course will be defined before the start of a semester.

3. Courses are of two kinds: Core and Elective.

   i. Core Course (CC): This is a course which is to be compulsorily studied by a student as a core requirement to complete the requirement of M. Tech. Signal Processing.

   ii. Elective Course: An elective course is a course which can be chosen from a pool of subjects. It is intended to support the discipline of study by providing an expanded scope, enabling exposure to another discipline/domain and nurturing a student’s proficiency/skill. An elective may be of following types:

      a) Discipline Centric Elective (ED): It is an elective course that adds proficiency to the students in the discipline.

      b) Open Elective (EO): It is an elective course taken from other engineering disciplines that broadens the perspective of an Engineering student.

4. Each course contributes certain credits to the programme. A course is offered as a full course (4 credits). A full course is conducted with 3 hours of lectures and either 1 hour of tutorial or 2 hours of practical work per week.

5. A student of Postgraduate programme has to accumulate about 40% credits from the Core Courses and the remaining credits from the Elective Courses to become eligible for the award of degree/ diploma/ certificate programmes.

6. A course may also be designed without lectures or tutorials. However, such courses may comprise Field work, Outreach activities, Project work, Vocational Training, Seminars, Self-study etc. or a combination of some of these.
SCHEME OF COURSES – M.TECH. (SIGNAL PROCESSING)

7. A Project work/Dissertation is considered as a special course involving application of the knowledge gained during the course of study in exploring, analyzing and solving complex problems in real life applications. A candidate completes such a course on his own with an advisory support by a teacher/faculty member.

B. Examination and Assessment

The following system will be implemented in awarding grades and CGPA under the CBCS system.

1. Letter Grades and Grade Points: A 10-point grading system shall be used with the letter grades as given in Table 1 below:

<table>
<thead>
<tr>
<th>Letter Grade</th>
<th>Grade point</th>
</tr>
</thead>
<tbody>
<tr>
<td>O (Outstanding)</td>
<td>10</td>
</tr>
<tr>
<td>A+ (Excellent)</td>
<td>9</td>
</tr>
<tr>
<td>A (Very Good)</td>
<td>8</td>
</tr>
<tr>
<td>B+ (Good)</td>
<td>7</td>
</tr>
<tr>
<td>B (Above average)</td>
<td>6</td>
</tr>
<tr>
<td>C (Average)</td>
<td>5</td>
</tr>
<tr>
<td>P (Pass)</td>
<td>4</td>
</tr>
<tr>
<td>F (Fail)</td>
<td>0</td>
</tr>
<tr>
<td>Ab (absent)</td>
<td>0</td>
</tr>
</tbody>
</table>

2. Fail grade: A student obtaining Grade F shall be considered failed and will be required to reappear in the examination. If the student does not want to reappear in an elective subject (that is ED, EO but not CC courses) then he/she can re-register afresh for a new elective subject.

3. Non-credit course: For non credit courses, ‘Satisfactory’ or “Unsatisfactory” shall be indicated instead of the letter grade and this will not be counted for the computation of SGPA/CGPA. However, a student must get satisfactory to get the degree.

4. Fairness in Assessment: The CBCS promotes continuous evaluation system where end semester examinations weightage should not be more than 60%. The Departments should design their own methods for continuous evaluation. They have the flexibility and freedom in designing the examination and evaluation methods that best fits the curriculum, syllabi & teaching, learning methods. In this regard, the checks and balances be implemented which
enable departments would effectively and fairly carry out the process of assessment and examination.

5. Computation of SGPA and CGPA: The following procedure be used to compute the Semester Grade Point Average (SGPA) and Cumulative Grade Point Average (CGPA):

i. The SGPA is the ratio of sum of the product of the number of credits and the grade points scored in all the courses of a semester, to the sum of the number of credits of all the courses taken by a student, that is:

\[ \text{SGPA}(S_i) = \frac{\sum C_j \times G_j}{\sum C_i} \]

where \( S_i \) is the \( i^{th} \) Semester \( C_j \) is the number of credits of the \( j^{th} \) course and \( G_j \) is the grade point scored by the student in the \( j^{th} \) course.

ii. The CGPA is also calculated in the same manner taking into account all the courses taken by a student over all the semesters of a programme, i.e.

\[ \text{CGPA} = \frac{\sum_i C_i \times \text{SGPA}(S_i)}{\sum_i C_i} \]

where SPGA\((S_i)\) is the SGPA of the \( i^{th} \) semester and \( C_i \) is the total number of credits in that semester.

iii. The SGPA and CGPA shall be rounded off to 2 decimal points and reported in the transcripts.

iv. CGPA shall be converted into percentage of marks if required, by multiplying CGPA with 10.

III. PROGRAMME STRUCTURE

1. The M. Tech. Signal Processing programme consists of 4 semesters, normally completed in 2 years for Full-Time and 6 semesters, normally completed in 3 years for Part-Time. The total span period cannot exceed 4 years for Full-Time and 5 years for Part-Time.

2. The courses offered in each semester are given in the Semester-wise Course Allocation.
3. The discipline centric subjects under course courses (CC) and Discipline-centric elective (ED) categories are listed for each discipline separately.

4. A course may have pre-requisite courses that are given in the Semester-wise Course Allocation. A student can opt for an elective only if he/she has fulfilled its pre-requisites.

5. A student has to register for all electives before the start of a semester.

IV. COURSE CODIFICATION

The codes for various Postgraduate Programme are as follows:

i. Department of Electronics and Communication Engineering:
   1. Signal Processing-ECSP
   2. Embedded System and VLSI-ECES

ii. Department of Computer Engineering:
   1. Information System-COIS

iii. Department of Instrumentation and Control Engineering:
   1. Process Control-ICPC
   2. Industrial Electronics-ICIE
   3. Mechatronics-ICMT

iv. Department of Biotechnology:
   1. Biochemical Engineering - BTBC
   2. Bioinformatics- BTBF

v. Manufacturing processes and Automation Engineering:
   1. CAD CAM- MACD
   2. Manufacturing process and Automation Engineering.- MAMP
   3. Production Engineering- MAPE
   4. Engineering Management- MAEM
   5. Nanotechnology- MANT

The first two letters of the code represent the department, and the remaining two letters represent the course. The codes for Departmental core subjects and Domain-specific Electives are specific to each Discipline.

For 1st semester, the codes are:
### SCHEME OF COURSES – M.TECH. (SIGNAL PROCESSING)

</table>

VI. DECLARATION OF RESULTS

1. The M.Tech (SP) programme consists of 82 credits. A student will be awarded the degree if he/she has earned all 82 credits.

2. CGPA will be calculated on the basis of the best 78 credits earned by the student.

3. The candidate seeking re-evaluation of a course shall apply for the same on a prescribed proforma along with the evaluation fee prescribed by the university from time to time only for the End Semester Examination within seven days from the date of declaration of result.

4. The Institution/University may cancel the registration of all the courses in a given semester if
   i. The student has not cleared the dues to the institution/hostel.
ii. A punishment is awarded leading to cancellation of the student’s registration.

VII. EVALUATION AND REVIEW COMMITTEE

The Committee of Courses and Studies in each department shall appoint one or more Evaluation-cum-Review Committees (ERC), each committee dealing with one course or a group of courses. This ERC consists of all faculty members who are likely to teach such courses in the group. Normally Head of the department shall be ERC Chairman.

The ERC has the following functions-

(i) To recommend appointment of paper setters/examiners of various examinations at the start of each semester.

(ii) To prepare quizzes, assignments, test papers etc. for Continuous Assessment (CA), Mid-Semester examination (MS) and End Semester (ES) examination and to evaluate them. Normally, each concerned faculty member, who is also a member of ERC, will do this job for his/her class. However, in exceptional circumstances any part of the work may be entrusted to some other member of the ERC.

(iii) To consider the individual representation of students about evaluation and take remedial action if needed. After scrutinizing, ERC may alter the grades awarded upward/downward. The decision of the ERC shall be final.

(iv) To moderate assignments, quizzes etc. for courses given by each of the concerned faculty members for his/her class with a view to maintain uniformity of standards.

(v) To review and moderate the MS and ES results of each course with a view to maintain uniformity of standards.

(vi) To lay guidelines for teaching a course.

VIII. ATTENDANCE, PROMOTION AND DETENTION RULES

1. A student should normally attend all the classes. However, a student will be allowed to appear in the examination if he/ she has put in a minimum of 75% attendance separately in each course for which he / she has registered. A relaxation up to a maximum of 25% may be given on the production of satisfactory evidence that (a) the student was busy in authorized activities, (b) the student was ill.

2. A student should submit the evidence to the fact 1(a) and / or 1(b) above within seven working days of resuming the studies. Certificates submitted later will not be considered.

3. No relaxation in attendance beyond 25% is permitted in any case.

4. A student may re-register for a course if he/ she want to avoid a decrement in the grades.
SCHEME OF COURSES – M.TECH. (SIGNAL PROCESSING)

5. There shall be no supplementary examinations. A student who has failed in a course will have to re-register for the course in a subsequent year.

6. If the student does not want to reappear in an elective course (that is, ED, EO, but not CC courses) then he/she can re-register afresh for a new elective course.

IX. CURRICULUM MODIFICATION

The curriculum will be updated regularly within a period of 5 to 10 years since last revision, to keep pace with the advancements in the field of Biochemical Engineering.

X. CENTRAL ADVISORY COMMITTEE

There shall be a Central Advisory Committee consisting of the following—

a) Dean, Faculty of Technology, Chairman
b) Dean PGS
c) Head of Institution
d) Heads of Departments running M. Tech Courses

XI. PROGRAM EDUCATIONAL OBJECTIVE:

The major objectives of the M. Tech programme in Signal Processing are to equip the students with adequate knowledge and skills in Signal Processing to prepare them for the following career options:

1. Provide graduates with a strong foundation in Signal Processing fundamentals to enable them to devise and deliver efficient solutions to challenging problems in Electronics, Communications and allied disciplines.

2. Practice the ethics of their profession consistent with a sense of social responsibility and develop their engineering design, problem-solving skills and aptitude for innovations and research as they work individually and in multi disciplinary teams.

3. Be receptive to new technologies and attain professional competence through lifelong learning such as doctoral degree, professional registration, publications and other professional activities.
XII. PROGRAM OUTCOMES

1. Capability of applying knowledge of Signal Processing to solve Communication Engineering problems.
2. Ability to create suitable models of complex systems and analyze them.
3. Capability to design/conduct experiments and draw inference and conclusions there from.
4. Ability to provide/devise solutions for engineering problems related to the needs of the Industries and Society.
5. Ability to apply knowledge of Signal Processing to develop useful products/prototypes/hardware/software.
6. Capability to understand professional and ethical responsibilities.
7. Capability to communicate effectively, orally as well as in writing.
8. Ability to work independently as well as part of teams.

SCHEME OF COURSES – M.TECH. (SIGNAL PROCESSING)

CO-1: A comprehensive understanding of the Discrete Fourier Transform (DFT), its properties, and applications of DFT in spectrum estimation of a discrete-time signal.
CO-2: A comprehensive understanding of the problems related to computational complexity of the DFT and use of Fast Fourier Transform (FFT) to compute DFT with reduced computations.
CO-3: Study and analysis of different realizations/structures of digital systems.
CO-4: A comprehensive understanding of the significance of poles and zeros in designing of digital filters.
CO-5: A comprehensive understanding of analysis and design of linear-phase FIR digital filters, FIR digital differentiators, Hilbert transformers and their applications.
CO-6: A comprehensive understanding of analysis and design of IIR digital filters and their applications.
CO-7: A comprehensive understanding of the concept of finite word length effects in signal processing systems, e.g., DFT computation, FIR and IIR system structures, zero-input limit cycle

COURSE CONTENT:

SUGGESTED READINGS:

COURSE OUTCOME (CO):
CO-1: A comprehensive understanding of MMSE & orthogonality principle and derivation of the Wiener filter for signals with known second order statistics.
CO-2: A comprehensive understanding of formulation of the Wiener filter as a constrained optimization problem.
CO-3: A comprehensive study and analysis of Lattice structures of FIR (AZ), and IIR (AP and PZ Lattice-Ladder) systems and their advantages.
CO-4: A comprehensive understanding of spectrum estimation methods

COURSE CONTENT:

Passed in the meeting of Standing Committee on Academic Matters, University of Delhi held on June 3, 2016.

</table>

COURSE OUTCOME (CO):
CO-1: A basic understanding of the random signal theory, adaptive signal processing systems and their applications to a variety of practical problems such as interference and echo cancellation, system identification and channel equalization etc.

CO-2: A comprehensive understanding of MMSE & orthogonality principle, derivation of the Wiener filter for signals with known second order statistics and formulation of the Wiener filter as a constrained optimization problem.

CO-3: A comprehensive study and analysis of Lattice structures of FIR (AZ), and IIR (AP and PZ Lattice-Ladder) systems, their advantages.

CO-4: Study the Levinson-Durbin algorithm for the solution of Wiener-Hopf equations.

CO-5: A comprehensive understanding of derivation and application of the Steepest Descent and Newton’s algorithm for iteratively estimating the Wiener filter weights.

CO-6: A comprehensive understanding of derivation and application of the LMS algorithm for iteratively estimating the Wiener filter weights.

CO-7: A comprehensive understanding of derivation and application of the RLS algorithm for iteratively estimating the Wiener filter weights.

### SYLLABUS OF DISCIPLINE CENTRIC ELECTIVE COURSES

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Name</th>
<th>Course Structure</th>
<th>Pre-Requisite</th>
</tr>
</thead>
<tbody>
<tr>
<td>SPD01</td>
<td>Probability Theory and Stochastic Process</td>
<td>L - T - P 3 - 1/0 - 0/2</td>
<td>_____</td>
</tr>
</tbody>
</table>

**COURSE OUTCOME (CO):**

- **CO-1:** Fundamental knowledge of the basic probability concepts
- **CO-2:** A comprehensive understanding of standard distributions which can describe real life phenomena.
- **CO-3:** Acquire skills in handling situations involving several random variable and functions of random variables
- **CO-4:** Understand and characterization of random process and their response to LTI systems.

**COURSE CONTENT:**

Introduction to Signal: Continuous time, discrete time, deterministic, random signals, Random variables: Introduction, discrete and continuous random variable, cumulative distribution function (c.d.f.), probability density function (p.d.f.), characteristic function (c.f.), functions of one random variable, functions of two random variable, moments, Distributions: Bernoulli, Binomial, Poisson, Geometric, Gamma, Gaussian, Rician, Rayleigh, chi-square, exponential, Nakagami-m, Weibull, log-normal. Multivariate Gaussian random variables, Complex Gaussian distribution. Introduction to random processes, specification of random processes, nth order joint PDFs, independent increments, stationary increments, Markov property, Markov process and martingales, Gaussian process, Poisson process and Brownian motion, Mean and correlation of random processes, stationary, wide sense stationary, ergodic processes, Mean-square continuity, mean-square derivatives. Random processes as inputs to linear time invariant systems: power spectral density, Gaussian processes as inputs to LTI systems, white Gaussian noise.

**SUGGESTED READINGS:**

<th>Course Structure</th>
<th>Pre-Requisite</th>
</tr>
</thead>
<tbody>
<tr>
<td>SPD02</td>
<td>Digital Communicaion</td>
<td>L - T - P 3 - 1/0 - 0/2</td>
<td>_____</td>
</tr>
</tbody>
</table>

**COURSE OUTCOME (CO):**

- **CO1:** Studied the different digital modulation techniques and are able to evaluate the error performance of digital communication system in the presence of noise.
- **CO2:** Gained the fundamental knowledge about Information theoretical concepts of digital
communications and can utilize these concepts for designing of various source coding algorithms.
CO3: Understand, analyze, and design fundamental digital communication systems.

COURSE CONTENT:
Characterization of communication signals and systems: Representation of bandpass signals and systems, signal space representation, representation of digitally modulated signals, spectral characteristics, Optimum receivers for the AWGN channel: Optimum receiver for signals corrupted by AWGN, performance of optimum receiver for memoryless modulation, Limits of Communication: Introduction to information, Entropy, Capacity of discrete and continuous time channels, Wireless Communication: Wireless Channel Models, path loss and shadowing models, statistical fading models, Narrow band and wideband fading models, review of performance of digital modulation schemes over wireless channels.

</thead>
<tbody>
<tr>
<td>SPD03</td>
<td>Analog IC for Signal Processing</td>
<td>L - T - P</td>
<td>3 - 1/0 - 0/2</td>
</tr>
</tbody>
</table>

COURSE OUTCOME (CO):
CO-1 To understand the devices available for Bi-CMOS ICs and their modelling
CO-2 To understand the basic building blocks their characteristics and their limitations
CO-3 To understand the basic pitfalls of Bi-CMOS circuits
CO-4 To appreciate the prevalent practices related to Bi-CMOS analog IC design

COURSE CONTENT:
Introduction to MOSFET device structure and operation, MOS as amplifier, Biasing in MOS amplifier circuits, small signal equivalent circuit model, Single stage MOS amplifiers, characterizing amplifiers, MOS internal capacitance and high frequency model, frequency response.
IC biasing-current sources, current mirrors and current-steering circuits, cascode and Wilson current mirror, Common Source, common gate and common drain IC amplifiers, low frequency and high frequency response, noise performance, Multiple-Transistor IC amplifiers, Cascade configuration, folded cascode and self cascode structure, Voltage follower, flipped voltage follower. MOS differential pair, small signal operation, differential gain, common mode gain, common mode rejection ration, non ideal characteristics, active loaded differential amplifier, Frequency response, Noise Spectrum, sources, types, Thermal and Flicker noise, representation in circuits, Noise bandwidth, Noise figure. CMOS analog integrated circuits, Op-amp design, practical opamp characteristics and model, DC offset and DC bias currents, Gain, bandwidth and slew rate, Noise, Input stage, output stage, CMOS and BiCMOS OTA, folded cascode CMOS OTA, Operational Current amplifier design, BiMOS and BiFET configurations, Current trends in Analog IC Design.

SUGGESTED READINGS:
### SCHEME OF COURSES – M.TECH. (SIGNAL PROCESSING)

Passed in the meeting of Standing Committee on Academic Matters, University of Delhi held on June 3, 2016.

</tbody>
</table>

**COURSE OUTCOME (CO):**
- CO-1: Foster ability to identify and code the module using different modeling styles.
- CO-2: Foster ability to write test benches in VHDL.
- CO-3: Acquired knowledge about FSM and how to code a FSM.
- CO-4: Ability to develop synthesizable code in VHDL.

**COURSE CONTENT:**
Digital hardware elements and their description in a hardware description language; system structuring methodology; hardware, software and firmware consideration in designing control units for arithmetic and logic processors; I/O processors with different methods of data handling: stored program control, electronic switching; process interface design such as numerical control, data acquisition systems, programmed logic arrays and designing with PLAs; microprocessor-based system design; technology considerations in system design. Introduction to place & route process, Introduction to ROM, PLA, PAL, Architecture of CPLD (Xilinx / Altera).

**SUGGESTED READINGS:**

**COURSE OUTCOME (CO):**
- CO-1: explain the requirement of source coding, channel coding etc.
- CO-2: understand the structure of various error correcting codes.
- CO-3: compare different codes like block codes, cyclic codes, and convolution codes.
- CO-4: discuss the trellis codes and their importance in communication theory.

**COURSE CONTENT:**
Finite Field Arithmetic: Introduction, Groups, Rings, Fields, Arithmetic of Galois Field Integer Ring, Polynomial Rings, Polynomials and Euclidean algorithm, primitive elements, Construction and basic properties of Finite Fields, Measure of information; Source coding; Communication channel models; Channel Capacity and coding; Block codes; Cyclic codes; BCH codes; Reed Solomon codes; Convolutional...

</table>

**COURSE OUTCOME (CO):**
CO1: Understand RF and Microwave circuits and devices.
CO2: Understand microwave circuit analysis techniques.
CO3: Understand S-parameters and network characterization techniques.
CO4: Apply the ZY Smith chart to design microwave matching networks.
CO5: Apply stability circles, stability criteria to solve stable and potentially unstable networks.
CO6: Design microwave amplifiers.
CO7: Design microwave oscillators.
CO8: Design microwave mixers.

**COURSE CONTENT:**
RF and Microwave circuit elements, Microwave circuit analysis techniques, Circuit representation of two-port networks, Review of high speed RF devices, RF transistor amplifier design and matching, microwave oscillator circuits, microwave passive components, microwave semiconductor devices, coupler, mixer circuits.

</tr>
</thead>
<tbody>
<tr>
<td>SPD10</td>
<td>Speech Processing</td>
<td>L - T - P 3 - 1/0 - 0/2</td>
<td>SPC02</td>
</tr>
</tbody>
</table>

COURSE OUTCOME (CO):
CO1: Understand basic characteristics of speech signal in relation to production and hearing of speech by humans.
CO2: Understand how the articulation mode of different classes of speech sounds determines their acoustic characteristics.
SCHEME OF COURSES – M.TECH. (SIGNAL PROCESSING)

CO3: Understand basic algorithms of speech analysis common to many applications in Time and frequency domain.
CO4: Solve given problems regarding parameter estimation in source-filter production models and regarding speech analysis and synthesis using these models,
CO5: Design a simple system for speech enhancement, end point detection, pitch period detection and its implementation into applications such as speech and speaker recognition, speech compression, speech enhancement etc.
CO6: Perform Matlab-based project(s) requiring some independent reading, programming, simulations, and technical writing.

COURSE CONTENT:
The speech signal, classification, process of speech production, acoustic phonetics, articulatory phonetics, Pitch, formants, various applications. Digital Model of Speech Signal: The process of Speech production, Sound propagation, tonal/ non-tonal components, global threshold (MPEG-1), Uniform lossless tube model, digital model. Time dependent processing of Speech, Short time average energy, short time average magnitude, short time average zero crossing rate, speech Vs silence discrimination, pitch period estimation, short time auto correlation function.
Short time Fourier analysis: Fourier transform interpretation, Linear filtering Interpretation, filter bank summation method, overlap addition method, Homomorphic speech processing. Digital representation of Speech: Sampling, A law, mu law, scalar quantization, vector quantization, mp3 compression.
Coding theory (strategies and standards) : Introduction, algorithm objectives and requirements, coding strategies, waveform coding, voice coders, hybrid coders, CELP. Insight to Speech recognition: Basic building blocks, Hidden markov models

</tbody>
</table>

**COURSE OUTCOME (CO):**
- CO-1: Understand the principles of Array Signal Processing
- CO-2: Understand the basics of Beam Forming.
- CO-3: A comprehensive understanding of linear arrays.
- CO-4: A comprehensive understanding of subspace methods.

**COURSE CONTENT:**
- Signals in space and time, spatial frequency, Direction vs. frequency, Array Signal Model, Wave fields, Far field and Near field signals, Spatial sampling, Nyquist criterion, Sensor arrays, Uniform linear arrays, planar and random arrays, Array transfer (steering) vector, Array steering vector for ULA. Broadband arrays, Aliasing in spatial frequency domain, Spatial Frequency Transform, Spatial spectrum, Spatial Domain Filtering, Beam Forming, Spatially white signal, Non parametric methods - Beam forming and Capon methods, Resolution of Beam forming method, Subspace methods - MUSIC, Minimum Norm and ESPRIT techniques, Spatial Smoothing

CO1: A comprehensive understanding of Multirate Signal Processing.
CO-2: A comprehensive understanding of analysis and design of linear-phase FIR digital filters used in decimation & interpolation, and their computationally efficient implementation techniques.
CO-3: A comprehensive understanding of the Difference between Fourier and wavelet transform.
CO-4: Understanding of multiresolution analysis for different types of signals.
CO-5: A comprehensive understanding of data compression using wavelet transforms.
CO-6: Implement and apply wavelet transform for various applications.

COURSE CONTENT:
Basic Multirate operations, Interpolator, Decimator, Fractional sampling rate convertor, Multi-stage designs, Identities, Computationally efficient realizations of Interpolator and Decimator, Nyquist Filters, Half band filters, Introduction, M-channel Filter banks, QMF banks, Perfect reconstruction systems, Alias free filter banks, Paraunitary perfect reconstruction Filter banks, Linear phase perfect reconstruction QMF banks, STFT, Wavelet Transform, Discrete Wavelet Transform, Multiresolution analysis, Discrete-time orthonormal wavelets and their Relationship to Filter Banks, Digital filtering interpretation, examples of orthogonal basic generating wavelets, Data Compression: transform coding, DTWT for image compression, audio compression, and video coding using multiresolution techniques.

COURSE OUTCOME (CO):

CO1: gain the fundamental knowledge about the propagation of light beam in atmosphere

CO2: discuss the various channel issues like atmospheric turbulence, absorption losses and scattering.

CO3: analyze the performance of simple optical wireless communication systems.

CO4: understand about the modulators and demodulators of optical signals.

COURSE CONTENT:

Introduction: Propagation of light in unguided media - laser beam characteristics -atmospheric effects on optical signals - coding for atmospheric optical propagation.

Light Sources: Modulators - photo detectors and receivers - optical amplification – optical signal to noise ratio - acquisition, pointing and tracking - adaptive and active optics – laser safety.

Performance analysis of various optical wireless systems, MIMO optical wireless communications, Cooperative FSO systems, Hybrid FSO and RF - FSO point to multipoint – FSO point to mobile.

FSO inherent security features; FSO Specific Applications: FSO networks for highway assisted communications - mesh FSO in disaster areas - visual light communication.

COURSE OUTCOME (CO):

CO1: understand the principles of Cryptography and Network Security algorithms, public key cryptography.
CO3: Understand the basic theory of Encryption techniques.
CO4: understand authentication functions and protocols, Message Authentication Codes, Hash Functions MD5 message Digest algorithm, Secure Hash Algorithm, HMAC Digital Signatures, and Digital Signature Standard.
CO5: possess necessary background of authentication Services, Electronic Mail Security, IP Security,
Web Security.
CO6: Understand the basic theories behind Intrusion detection, password management, Viruses and related Threats, Virus Counter measures, Firewall Design Principles.
CO7: Realize cryptography and network security techniques and implement the design using some simulation techniques.

COURSE CONTENT:
Introduction to security attacks, services and mechanism, Classical encryption techniques substitution ciphers and transposition ciphers, cryptanalysis, steganography, Stream and block ciphers, Data encryption standard(DES), Introduction to group, field, finite field of the form GF(p), Advanced Encryption Standard (AES) encryption and decryption Fermat’s and Euler’s theorem, Primality testing, Chinese Remainder theorem, Discrete Logarithmic Problem, Principals of public key crypto systems, RSA algorithm, security of RSA, Message Authentication Codes, Digital Signatures: Digital Signatures, Elgamal Digital Signature Techniques, Digital signature standards (DSS), Key Management and distribution: Symmetric key distribution, Diffie-Hellman Key Exchange, Public key distribution, X.509 Certificates, Public key Infrastructure. Authentication Applications: Kerberos, IP Security, System Security

COURSE OUTCOME (CO):
In this comprehensive course, student will learn the fundamentals of project management: how to initiate, plan, and execute a project that meets objectives and satisfies stakeholders. This course provides a step-by-step guide to planning and executing a project and to develop a manageable project schedule.

COURSE CONTENT:
Objectives of Project Planning, monitoring and control of investment projects. Relevance of social cost benefit analysis, identification of investment opportunities. Pre-feasibility studies.
Project Preparation: Technical feasibility, estimation of costs, demand analysis and commercial viability, risk analysis, collaboration arrangements; financial planning; Estimation of fund requirements, sources of funds. Loan syndication for the projects. Tax considerations in project preparation and the legal aspects.
Project appraisal: Business criterion of growth, liquidity and profitability, social cost benefit analysis in public and private sectors, investment criterion and choice of techniques. Estimation of shadow prices and social discount rate.
Project review/control-Evaluation of project. PERT/CPM. resource handling/leveling. Cost and Time Management issues in Project planning and management, success criteria and success factors, risk management.

COURSE OUTCOME (CO):
This Course Aims at Instituting Entrepreneurial skills in the students by giving an overview of who the entrepreneurs are and what competences are needed to become an entrepreneur.

**COURSE CONTENT:**
Concept and Definitions, Entrepreneur v/s Intrapreneur; Role of entrepreneurship in economic development; Entrepreneurship process; Factors impacting emergence of entrepreneurship; Managerial versus entrepreneurial Decision Making; Entrepreneur v/s Investors; Entrepreneurial attributes and characteristics; Entrepreneurs versus inventors; Entrepreneurial Culture; Women Entrepreneurs; Social Entrepreneurship; Classification and Types of Entrepreneurs; EDP Programmes; Entrepreneurial Training; Traits/Qualities of an Entrepreneurs.

Generating Business idea- Sources of Innovation, methods of generating ideas, Creativity and Entrepreneurship; Challenges in managing innovation; Business planning process; Drawing business plan; Business plan failures; Entrepreneurial leadership- components of entrepreneurial leadership; Entrepreneurial Challenges; Legal issues – forming business entity, considerations and Criteria, requirements for formation of a Private/Public Limited Company, Intellectual Property Protection-Patents Trademarks and Copyrights – importance for startups, Legal Acts Governing Business in India.
Marketing plan— for the new venture, environmental analysis, steps in preparing marketing plan, marketing mix, contingency planning; Organizational plan – designing organization structure and Systems; Financial plan – pro forma income statements, pro forma cash budget, funds Flow and Cash Flow statements; Pro forma balance sheet; Break Even Analysis; Ratio Analysis.
Debt or equity financing, Sources of Finance - Commercial banks, private placements, venture capital, financial institutions supporting entrepreneurs; Lease Financing; Funding opportunities for Startups in India.
Managing growth and sustenance- growth norms; Factors for growth; Time management, Negotiations, Joint ventures, Mergers & acquisitions.

COURSE OUTCOME (CO):

Supply chain management consists of all parties (including manufacturer, marketer, suppliers, transporters, warehouses, retailers and even customers) directly or indirectly involved in fulfillment of a customer. The main objective is to acquaint the students with the concepts and tools of supply chain management and logistics as relevant for a business firm.

COURSE CONTENT:

Concept of supply chain management (SCM) and trade logistics; Scope of logistics; Logistic activities – an Overview; Contribution of logistics at macro and micro levels; SCM and trade logistics; Business view of SCM; Concept, span and process of integrated SCM; Demand management – methods of forecasting; Supply chain metrics (KPIs), performance measurement and continuous improvement; Product development Process and SCM; Strategic role of purchasing in the supply chain and total customer satisfaction; Types of purchases; Purchasing cycle.

Role of Relationship marketing in SCM; Managing relationships with suppliers and customers; Captive buyers and suppliers; Strategic partnerships; Supplier-retailer collaboration and alliances.

Transportation-Importance of effective transportation system; Service choices and their characteristics; inter-modal services; Transport cost characteristics and rate fixation; In-company management vs. outsourcing; World sea borne trade; International shipping- characteristics and structure; Liner and tramp operations; Liner freighting; Chartering-Types, principles and practices; Development in sea transportation-Unitization, containerisation, inter and multimodal transport; CFC and ICD. Air transport: Set up for air transport and freight rates; Carriage of Goods by sea -Role and types of cargo intermediaries. Warehousing and inventory management: Reasons for warehousing; Warehousing evaluation and requirements; Warehousing location strategies; Inventory management principles and approaches; Inventory categories -EOQ, LT, ICC

Technology in logistics – EDI, bar Coding, RFID etc., data warehousing, electronic payment transfers; Business management systems; TRADITIONAL ERP, SPECIAL ERP, MR, DRP, PDM, EIP, CPFR, WMS, TMS; Re-engineering the supply chain- Future directions.

Passed in the meeting of Standing Committee on Academic Matters, University of Delhi held on June 3, 2016.

**COURSE OUTCOME (CO):**
Organisation Development is a growing field of Human Resource Management. It has its foundations in a number of behavioural and social sciences.

**COURSE CONTENT:**
Organizational Systems and Human Behavior - Developing a basic knowledge of how organizations and groups function as systems; introducing and discussing various theoretical approaches and issues. Interpersonal and Consulting Skills - Increasing effectiveness as a change agent by providing a variety of opportunities in order to increase self-awareness, practice alternative ways of approaching personal and interpersonal problem-solving and develop basic consulting and interviewing skills.

Introduction to Organization Development - Introducing some basic theories, models and methods in the field of organization development, especially those relating to the role of consultant and strategies for change. Intervention and Change in Organizations Consolidating and further developing consulting skills and strategies Action Research Project - Carrying out a change activity in an organization, while also researching the effects and for the process. This provides participants with an opportunity to consolidate and de, menstruate skills and knowledge gained in other units of the course.

<td>____</td>
</tr>
</tbody>
</table>

**COURSE OUTCOME (CO):**
This course helps students in understanding the basics of management and Industrial organisation.

**COURSE CONTENT:**
Principles of management, General idea, various functions, scope of engineering. Organisation structure, Types, merits and demerits. Plant location and layout, Factors effecting location, types of layout. Production planning and control, Sequence of planning and control of production. Scheduling, routing,

</table>

COURSE OUTCOME (CO):
This subject focuses on the specifics of strategy and organization of the multinational company, and provides a framework for formulating successful and adaptive strategies in an increasingly complex world economy.

COURSE CONTENT:
Globalization of industries, the continuing role of country factors in competition, organization of multinational enterprises, and building global networks, Analysis of competitive situations from the general management point of view, including fit between key environmental forces and the firm's resources, and changes in these over time. Formulating and implementing strategy based on that analysis. Developing and leveraging a firm's core competencies to gain long-term sustainable advantage.

</table>

COURSE OUTCOME (CO):
The students will learn about system definitions and role of system analyst. They will learn about system modeling and design. They will be exposed to System Implementation and Maintenance issues.

COURSE CONTENT:
System definition and concepts: Characteristics and types of system, Manual and automated systems Real-life Business sub-systems: Production, Marketing, Personal, Material, finance Systems models types of models: Systems environment and boundaries, Real time and distributed systems, Basic principles of successful systems Systems analyst: Role and need of systems analyst, Qualifications and responsibilities, Systems Analyst, agent of change.
Various phases of systems development life cycle: Analysis, Design, Development, Implementation,
## SCHEME OF COURSES – M.TECH. (SIGNAL PROCESSING)

Passed in the meeting of Standing Committee on Academic Matters, University of Delhi held on June 3, 2016.

### Maintenance

Systems Design and modeling: Process modeling, Logical and physical design, Design representation, Systems flowcharts and structured charts, Data flow diagrams, Common diagramming conventions and guidelines using DFD and ERD diagrams. Data Modeling and systems analysis, designing the internals: Program and Process design, Designing Distributed Systems

### SUGGESTED READINGS:

### COURSE OUTCOME (CO):

- CO-1. General understanding of organization in biological systems
- CO-2. Conceptual knowledge of functioning in biological systems
- CO-3. Clarity about relevance of Biology to engineering graduates
- CO-4. Understanding human body or any other suitable organism as a study-model for engineering students.
- CO-5. Understanding electrical, chemical and magnetic forces, and communication networks in biosystem.

### COURSE CONTENT:

The Biological system – An Introduction; Biomolecules &self assemblies; Molecular recognition; Bioenergetics; Communication network in biosystem; Mechanics in biology; Storage, preservation and propagation of biological information; Biomaterials in engineering applications; Organisms as factories for biomaterials; Engineering organisms for novel applications

### SUGGESTED READINGS:

# SCHEME OF COURSES – M.TECH. (SIGNAL PROCESSING)

COURSE OUTCOME (CO):

- CO-1: To be able to assess the energy resources available worldwide
- CO-2: To understand the negative impact of conventional energy resource utilization on ecosystem
- CO-3: To learn about various types of pollutions and their control strategies
- CO-4: To understand renewable energy resources and their socio-economic impact
